

Novodiag® CarbaR+ Assay

High-performing, fully-automated on-demand screening of the most clinically relevant carbapenemases and colistin resistance in one single test.

Easy to use solution with PCR and microarray performance.

The **Novodiag® CarbaR+ assay**, performed with the Novodiag System, is a cartridge-based **molecular test** for qualitative detection of **carbapenemases and colistin resistance**. The test uses **rectal swabs and pure cultures** from patients.

Targets and performances:

PPA = Positive Percent Agreement, NPA = Negative Percent Agreement

*Detected only when promoter ISAbal is present

N= 87 pure cultures, 211 rectal swabs

Designed for a practical workflow

Features	Advantages & Benefits
Comprehensive panel	Improved patient safety
Rectal swab and pure culture samples	Fast infection control implementation and epidemiological surveillance
Results in approx. 90 min	Faster diagnosis compared to traditional methods Time and cost effectiveness Improved patient outcome
On-demand testing	Improved workflow and time to results Increased lab revenue
Fully-automated workflow with limited hands-on time, closed system	Better reproducibility, precision and productivity
Easy to use and interpret	Time and labour saving No need for highly trained personnel enabling decentralised testing
